

A. Security distinction: causal dependence is not authority

Security question: does observable causal dependence imply that the evidence itself carries authorization information or policy authority?

Authorized evidence can be causally necessary without itself being an authorization signal.

B. A13-C0 ecological evidence and leave-one-suite robustnessC. Breadth across trajectory backbones

Primary population: 73 rows → 29 primary-valid decisions / 25 tasks.
Headline: SPECIFIED=0.750, DELEGATED=0.167, Δ =+0.5833, 95% CI [+0.1555, +0.9394].
All leave-one-suite point estimates remain positive; banking/workspace CIs cross zero.

B1 provides directional breadth rather than replacing the primary A13-C0 ecological estimand.
Both B1 replications retain a positive H direction, but their confidence intervals include zero.
