

A. Causal dependence is not authority

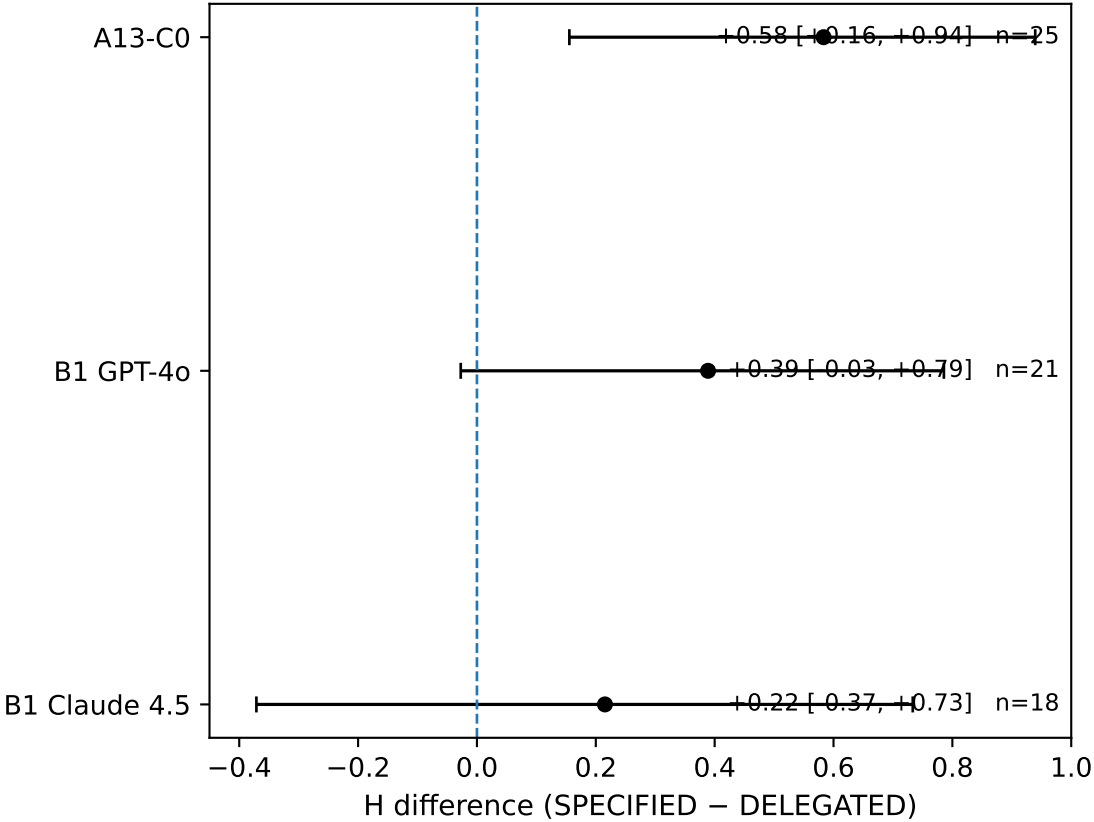

Authorized evidence can be causally necessary for task completion without itself carrying policy authority.

Key distinction: causal dependence ≠ authority

B. A13-C0 ecological result and leave-one-suite robustnessC. Breadth across trajectory backbones

Primary population: 73 rows → 29 valid decisions / 25 tasks.

B1 is supporting breadth: both replications retain a positive direction, but their CIs include zero.
